## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-2 are rejected under 35 U.S.C. 102(b) as being anticipated by Kawamoto et al. (US 4,954,736). Kawamoto teaches a magnet fixing structure comprising multiple steel plates comprising stacked yoke 12 (c.3, lines 40-43); receptacles (not numbered; Fig.2) at equal intervals in the outer circumference of each plate; magnets 17a-17d disposed in each receptacle; each receptacle and plate defining two lateral faces (formed by holding portions 13a-13d and expanded portions 14a-14d), a bottom face (not numbered, formed by yoke 12) and an opening opposite the bottom face (not numbered; formed between expanded portions 14a-14d); each adjoining section of the lateral faces and the bottom face formed with a dented section (radially inward semi-cylindrical recesses 15a-15d and radially inward recesses 16a-16g) which divide the two lateral faces and the bottom face of each receptacle (defined by the radially inward recesses 15a-15d and 16a-16g; see Fig.3) to form multiple resilient plates, whereby the magnet is tightly fitted between the plates (c.4, lines 17-25).

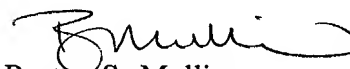

Regarding claim 2, the opening of the receptacle between the two expanded portions 14a-14d is slightly smaller than an internal width of the receptacle and the two lateral faces are slopes gradually diverging from outer side to inner side (see Fig.2).
